

Use Case Name:profile

Identifier: UC001

Precondition:User must be logged in our job portal.

Main Flow:

1. If the user registers for the first time, then he is redirected to the create profile page, where he enters personal information. The user may upload his resume or leave.
2. After creation of profile, the user is redirected to jobs recommendation page, where he enters information about his skills,interests and dream company.
- 3.If the user has already been registered so user clicks on edit profile button.
- 4.User edits his personal profile and also he can change his job recommendations in this edit profile section.
- 5.System asks for checking and confirmation of editing profile.
- 6.System updates the profile with the new information.

Alternative Flow:

- 1a. If the user provides invalid information in the edit profile or during create profile:
 1. System displays error messages for the invalid fields.
 2. User corrects the information and resubmits the profile.

Triggers:User selects edit profile from the dashboard.

Postcondition: The user's profile is updated or created with the new information provided.
