Use Case Name: Job Posting
Identifier: U005

Precondition:
- User must be logged into the "Job Fiction" platform.
- User should have the appropriate role and permissions to create job postings (e.g., employer or administrator).

Main Flow:
- User navigates to the "Create Job Posting" section of the "Job Fiction" platform.
- User selects the option to create a new job posting.
- The system presents a job posting form with fields to input job details, including: Job title
- Job description
- Job location
- Employment type (e.g., full-time, part-time, contract)
- Required qualifications
- Salary range (if applicable)
- Contact information
- Company details
- Other relevant job-related information
- User completes the job posting form with the necessary information.
- User reviews the information for accuracy and completeness.
- User submits the job posting by clicking the "Post Job" or "Submit" button.
- The system validates the job posting details, checking for any missing or invalid information.
- If the job posting details are valid, the system saves the job posting to the platform's database.
- The system sends a confirmation message to the user, acknowledging the successful job posting.

Alternative Flow:
- If the user decides not to submit the job posting after accessing the job posting form, they can choose to navigate back to the previous page or cancel the job posting creation. No job posting is created in this case.

Postcondition:

- A new job posting is created and added to the "Job Fiction" platform, visible to job seekers who match the criteria specified in the posting.

Actors:

- Job Poster (User): The individual, such as an employer or administrator, responsible for creating and managing job postings on the "Job Fiction" platform.
